

To expand Solar Sharing, we need new solutions

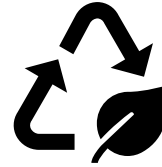

Agriculture

Low profitability
Left cultivated land
Low food self-sufficiency ratio

Energy Industry

Lack of the land
Environmental problem
Needs of diversifying

Solar sharing solves both issues!!

However...

Barriers to install solar sharing

- High cost of facilities (more expensive than normal photovoltaic(PV) power system)
- Acceptance on farmer side (Limited evidence, obstructions on farmland, appearance)

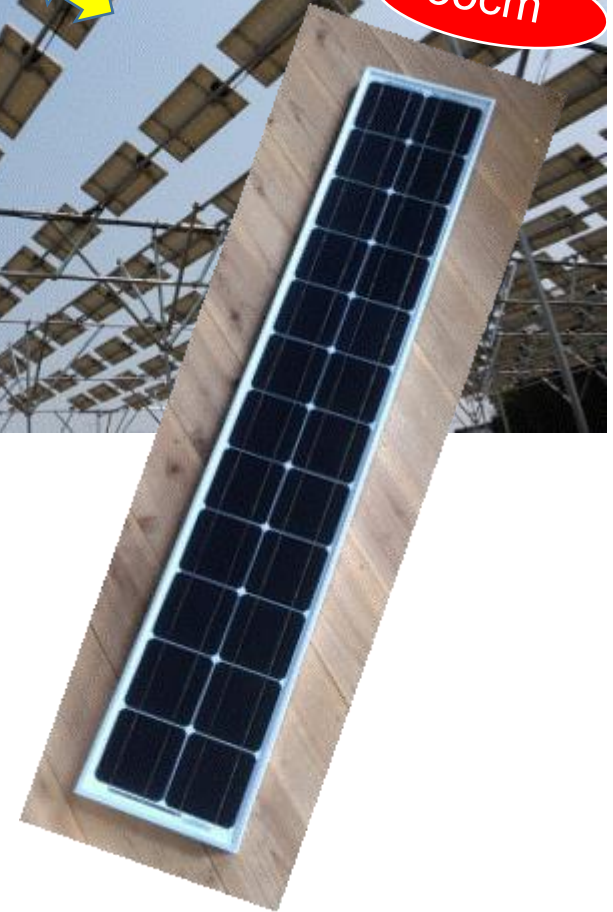

We need to find solutions

- Lower cost of facilities, new technologies for Solar Sharing
- Ideas to make farmers accept Solar Sharing

What's Solar Sharing?

- ✓ Install the platform on farmland (2.5m~3.5m height)
- ✓ Arrange narrow solar panels to keep space for photosynthesis (About two-thirds)

Farm machines can work under solar sharing platform
